

SECTION 6.2_DST-100 / DST-200

N² BLANKETING VALVE

INTRODUCTION

The model DST-100 and DST-200, N² Blanket gas controller, helps gas pressure to maintain in constant state in the vapor space of storage Tanks. When liquid run out from storage vessel or vacuum state take place because of temperature dropping, N² Blanket gas controller has a ability of control desired pressure within the fixed limits. Besides above subjects, prevents air and humidity from entering into storage vessel, So it can preserve products, and also protect from a fire. It protects the tank from explosion by restricting spark. It prevents the outflow of fluid by evaporation.

Blanketing Capacity

DST-100 (DN 15 ~ DN 25)	Min. 179 ~ Max. 1060 Nm ³ /hr for Nitrogen
DST-200 (DN 32 ~ DN 50)	Min. 465 ~ Max. 2760 Nm ³ /hr for Nitrogen

Body Materials SS304 and SS316 with various trims

Sizes range DN 15, 20, 25, 40, 50 with ASME 150Lb flanges (Other connection all available)

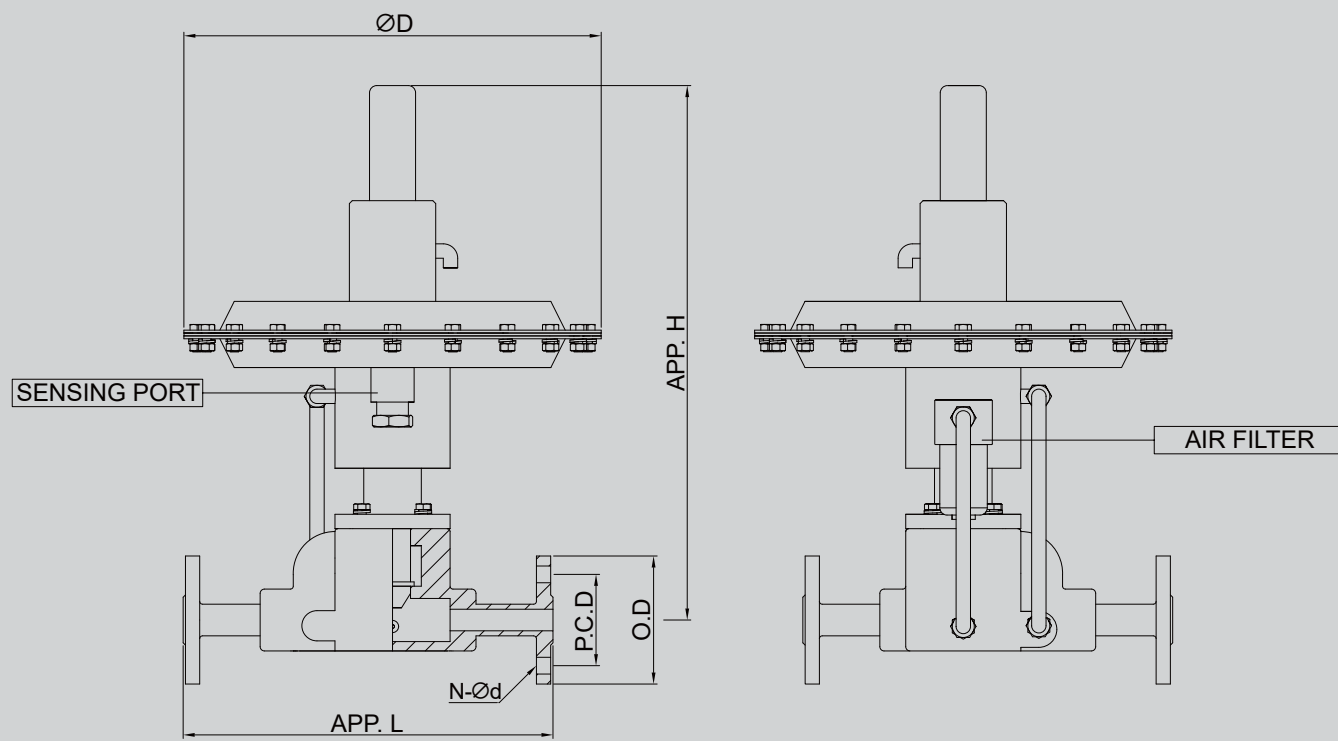

Rules & Certifications API 2000 7th Edition - "Calculation for Highest requirements with no flame arrester for Inert-gas-Blanketing"
